DETAILED ACTION

Allowable Subject Matter

Claims 1-340 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: Although Motley et al. (US PAT No. 5,581,197) teaches a method of programming a desired source resistance for a driver stage, one of ordinary skill in the art would not have been motivated to modify the teaching of Motley et al. to further includes, among other things, the specific of an output impedance compensator configured to adjust the impedance of the level shifter in accordance with the impedance adjustment signal and a reference voltage with respect to claims 1 and 34, and the specifics of an output driver comprising a first transistor for configured to provide electro-static discharge protection where the first transistor has a drain coupled to the output port and a gate coupled to an impedance compensator with respect to claim 18.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fifield et al. (US PAT No. 6,577,154) discloses a compensated driver for maintaining constant impedance during data transfer.

Emnett et al. (US PAT No. 5,576,640) discloses a CMOS driver circuit for fast single-ended bus.
